FASAL SURAKSHA

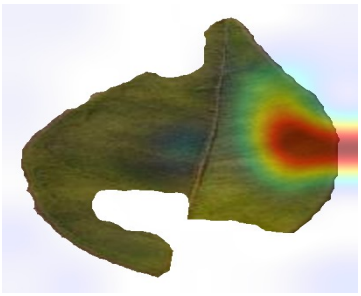
AI Crop Health Screening Card

Issued: 26 Oct 2026, 12:22
Card ID: FSC-997566
Type: AI screening - not a lab diagnosis

Crop:	Orange	**Likely disease:**	Haunglongbing (Citrus greening)	**Leaf severity:**	**4.7% (Mild)**	**AI confidence:**	94.6%

Leaf photo

Model attention (Grad-CAM)



Heatmap shows where the AI looked. It helps a human check the result; it does not prove the diagnosis is correct.

Yield estimate

Reference yield (healthy): 14.81 t/acre
Model estimate: 14.73 t/acre
Estimated shortfall: 0.6%

Statistical estimate from the inputs entered; it is not a measured loss and varies widely with weather, variety and management.

Suggested Treatment (advisory - confirm locally)

Type	Product	Dose	Frequency / safety
Organic / Bio	**Neem Seed Kernel Extract (NSKE 5%) + Micronutrient Foliar (Zn+Fe+Mn)**	- 5.0 mL (or g) / Liter water - 75.0 mL (or g) for 15.0L tank	Every 10 days. Spray foliage thoroughly to suppress psyllid vector. Apply zinc and iron micronutrients to correct greening chlorosis.
Chemical	**Imidacloprid 17.8% SL (0.5 mL/L) or Thiamethoxam 25% WG (0.4 g/L)**	- 0.5 mL (or g) / Liter water - 7.5 mL (or g) for 15.0L tank	Every 14 days. Target Asian Citrus Psyllid during new flush growth. Drench tree root zone or trunk application.

Use only pesticides registered for this crop in India, follow the product label, and confirm the plan with a local agronomist or Krishi Vigyan Kendra (KVK).

Evidence Record (for crop-insurance reporting)

Record ID: EVD-20261026-151AAC	**Farmer / insurance ID:** KCC-UP-98214	**Location:** 26.84670, 80.94620	**Evidence status:** **INCOMPLETE**
Follow-up priority: LOW - monitor and treat early	**Still needed:** Survey date; At least 3 photos (leaf close-up, plant, whole field)	**What to do:** Record dated, geotagged photos of the affected leaves, plants and whole field before and after treatment. Keep input purchase bills. Report to the insurer / bank / Agriculture Office through the official channel. This app's severity number is an estimate from one leaf image and is not a loss assessment.	**Insurance:** Crop insurance is settled under the scheme's own rules, not by this app. Contact your insurance company, bank branch or local Agriculture Office, and see pmfby.gov.in for the current guidelines and claim-intimation timelines. For localized calamities such as hailstorm, landslide, inundation, cloud burst or natural fire, report quickly (the scheme sets short intimation windows).

Generated by the FASAL SURAKSHA AI tool. Results are screening estimates from photos and entered data. This card does not decide any insurance claim or payout; those are determined by the insurer and the government under the scheme rules. For confirmation, contact your nearest Krishi Vigyan Kendra (KVK) or Agriculture Office.
